

Vivek Kumar Maurya

Software Developer

+91 7678462874 – vivekmaurya9612@gmail.com – LinkedIn – GitHub

Education

B.Tech in Computer Science and Engineering (AI & ML Specialization) Expected
Graduation: 2027
JC Bose University of Science and Technology, YMCA CGPA: 7.9/10

Experience

Software Development Intern Capital Care Group

- Developed and deployed the company website, capitalcarefintech.com, using Next.js, MySQL, and REST APIs.
- Worked with the startup team to implement responsive frontend interfaces and backend integration.

Personal Software Development Projects Ongoing

- Built web and mobile applications using React, Next.js, and React Native, integrating REST APIs, databases, and third-party services.
- Developed utility tools and automation scripts for personal workflows, including Markdown-to-HTML conversion and Travel Itinerary Planner.
- Managed projects and source code using Git and GitHub.

Technical Skills

Languages: JavaScript, Python, Java, SQL

Frameworks: React, Next.js, React Native

Databases: MongoDB, MySQL, Firebase, Typesense

Tools: Git, GitHub, REST APIs, Gemini API, Playwright, FFmpeg

Projects

Smart Queue Management System

- Built a full-stack queue management system using Next.js and MongoDB for digital customer queue management.
- Implemented authentication, email verification, QR-based queue registration, and responsive dashboards with backend API integration.

LazyBond

- Developed the React Native frontend for a cross-platform social networking application that helps users discover and connect with people for social activities.
- Implemented Firebase Authentication with Google Sign-In, integrated Firestore and Typesense Search, and contributed to publishing the app on the Google Play Store.

Calorie Tracker Application

- Designed and developed a React Native application for tracking daily calorie intake and estimating macronutrients and micronutrients.
- Built the frontend and integrated the Gemini API for AI-powered calorie estimation and nutritional insights.
- Contributed to backend API integration and application logic for Gemini-powered features.

Automated Clipping Tool

- Built an automation workflow that takes YouTube videos or playlists, downloads and processes the content, and prepares short-form clips for social media.

- Automated video processing, editing, and caption generation using FFmpeg, Python-based tools, and AI services.
- Implemented Playwright-based browser automation to upload and schedule processed clips to linked Instagram accounts.

Additional Information

- Currently exploring LLMs, Retrieval-Augmented Generation (RAG), Agentic AI, and Model Context Protocol (MCP) through hands-on projects and structured learning.
